

Objective : A conference CFP management system

What is CFP : A **call for papers (CFP)** is a method used in academic and other contexts for collecting book or journal articles or conference presentations.

What does a CFP need to have?

(Must need) Use Cases -

1. Potential speaker needs to register with the system
2. PS should be able to complete/edit his profile
3. PS should be able to submit/edit/delete his proposal(s)
4. Programming Committee should be able to register with the system
5. PC should be able to review, comment on and ratify proposals
6. PC should be able to query and mine information from proposal data
7. Admin should be able to setup proposal related information
